Covid-19 in Russia has not been exhaustively analyzed yet and medical landscapes in the post-Soviet context differ significantly from the Western models. We believe that such artifacts as face-masks are good for tracing relations between people, the virus, and the state. Contrary to the research based on data from the United States and China, our research reveals that there is not necessarily a cause-and-effect relationship between mask wearing and strong social ties. Face masks in Dagestan never became embodied artifacts despite strong social ties in the republic. Cultural and political context needs to be considered when thinking about the relationship between the strength of social ties and application of PPE.
